

API Testing
Total Test Cases: 10, Total Run: 10, Pass: 02, Fail: 08

TC_ID	Test Case Title	Test Steps	Test Data	Expected Result	Actual Result	Priority	Status
TC_API_01	Verify API response when searching with a valid keyword	1. Open Postman 2. Select POST /v1/items/search 3. Enter valid keyword iphone 4. Send request	"keyword": "Shoulder bag"	API should return HTTP 200, success: true, and display product results matching the specified keyword.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	High	FAIL
TC_API_02	Verify API response when applying a price range filter	1. Enter valid keyword 2. Set minimum price to 3000 3. Set maximum price to 5000 4. Send request	"keyword": "Shoulder bag" "price_from": 0 "price_to": 5000	API should return HTTP 200, success: true, and display product results within the specified price range.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	High	FAIL
TC_API_03	Verify API response when sorting products by price in ascending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -itemPrice. 4. Send the POST request. 5. Compare the reviewCount values in the response.	"keyword": "Shoulder bag" "sort": "itemPrice"	API should return HTTP 200, success: true, and display products sorted by price in ascending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	High	FAIL
TC_API_04	Verify API response when sorting products by price in descending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -itemPrice. 4. Send the POST request. 5. Compare the reviewCount values in the response.	"keyword": "Shoulder bag" "sort": "-itemPrice"	API should return HTTP 200, success: true, and display products sorted by price in descending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	High	FAIL
TC_API_05	Verify API response when sorting products by review average in ascending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -reviewAverage. 4. Send the POST request. 5. Compare the reviewAverage values in the response.	"keyword": "Shoulder bag" "sort": "reviewAverage"	API should return HTTP 200, success: true, and display products sorted by review average in ascending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	Medium	FAIL
TC_API_06	Verify API response when sorting products by review average in descending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -reviewAverage. 4. Send the POST request. 5. Compare the reviewAverage values in the response.	"keyword": "Shoulder bag" "sort": "-reviewAverage"	API should return HTTP 200, success: true, and display products sorted by review average in descending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	Medium	FAIL
TC_API_07	Verify API response when sorting products by review count in ascending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -reviewCount. 4. Send the POST request. 5. Compare the reviewCount values in the response.	"keyword": "Shoulder bag" "sort": "reviewCount"	API should return HTTP 200, success: true, and display products sorted by review count in ascending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	Medium	FAIL
TC_API_08	Verify API response when sorting products by review count in descending order	1. Open the API request in Postman. 2. Enter a valid product keyword. 3. Set sort to -reviewCount. 4. Send the POST request. 5. Compare the reviewCount values in the response.	"keyword": "Shoulder bag" "sort": "-reviewCount"	API should return HTTP 200, success: true, and display products sorted by review count in descending order.	API returned HTTP 200 and success: true, but no product results were returned in the result array.	Medium	FAIL
TC_API_09	Verify API response when searching with an invalid keyword	1. Open the API request in Postman. 2. Enter an invalid/non-matching keyword, e.g. xyzabc12345. 3. Send the POST request. 4. Verify the response status and response body. 5. Verify that the API handles the invalid keyword without returning a server error.	"keyword": "sv%^%\$busyd"	API should return HTTP 200, success: true, and no product results should be returned for the invalid keyword.	API returned HTTP 200 and success: true. No product results were returned for the invalid keyword.	Medium	PASS
TC_API_10	Verify API response when using invalid query parameters	1. Open the API request in Postman. 2. Enter a valid keyword. 3. Replace one valid query parameter with an invalid value, e.g. sort=invalid_sort or an invalid parameter type. 4. Send the POST request. 5. Verify that the API returns an appropriate validation/error response.	"keyword": 12345 "sort": "INVALID_SORT" "page": "one" "hits": -1,	API should handle the invalid query parameter appropriately and should not return valid product results based on the invalid parameter.	API returned HTTP 200 and success: true. No product results were returned when the invalid query parameter was provided.	Medium	PASS
